

How to Set Up Alarms through Slack

Why must it be a manual process?

In order to have a one-click solution to adding a Slack bot that would send notifications to a given channel in your workspace, Rabbitory would have to have infrastructure. The only way for Rabbitory to remain infrastructure-less while still enabling Slack notifications is this tutorial.

Step 1 - Creating an App

Go to <https://api.slack.com/apps> and click **Create New App**:

Step 2 - From Manifest

Choose **From a manifest**:

Create an app

Choose how you'd like to configure your app's scopes and settings.

From a manifest

Use a manifest file to add your app's basic info, scopes, settings & features to your app.

From scratch

Use our configuration UI to manually add basic info, scopes, settings, & features to your app.

Need help? Check our [documentation](#), or [see an example](#)

- Choose the workspace you want the app in from the next dropdown.
- Copy/Paste the following YAML into the YAML manifest input:

```
display_information:
  name: Rabbitory
features:
  bot_user:
    display_name: Rabbitory
    always_online: false
oauth_config:
  scopes:
    bot:
      - incoming-webhook
settings:
  org_deploy_enabled: false
  socket_mode_enabled: false
  token_rotation_enabled: false
```

- Click **Next**, then **Create**

Step 3 - Adding Webhook

- Navigate to **Incoming Webhooks** on the left navbar.

Incoming Webhooks

Activate Incoming Webhooks ☒

Incoming webhooks are a simple way to post messages from external sources into Slack. They make use of normal HTTP requests with a JSON payload, which includes the message and a few other optional details. You can include [message attachments](#) to display richly-formatted messages.

Adding incoming webhooks requires a bot user. If your app doesn't have a [bot user](#), we'll add one for you.

Each time your app is installed, a new Webhook URL will be generated.

If you deactivate incoming webhooks, new Webhook URLs will not be generated when your app is installed to your team. If you'd like to remove access to existing Webhook URLs, you will need to [Revoke All OAuth Tokens](#).

Webhook URLs for Your Workspace

To dispatch messages with your webhook URL, send your [message](#) in JSON as the body of an `application/json` POST request.

Add this webhook to your workspace below to activate this curl example.

Sample curl request to post to a channel:

```
curl -X POST -H 'Content-type: application/json' --data '{"text":"Hello, World!"}' YOUR_WEBHOOK_URL_HERE
```

Webhook URL	Channel	Added By
-------------	---------	----------

- Scroll to the bottom and click **Add New Webhook to Workspace**:

Webhook URLs for Your Workspace

To dispatch messages with your webhook URL, send your [message](#) in JSON as the body of an `application/json` POST request.

Add this webhook to your workspace below to activate this curl example.

Sample curl request to post to a channel:

```
curl -X POST -H 'Content-type: application/json' --data '{"text":"Hello, World!"}'
https://hooks.slack.com/services/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
```

Copy

Webhook URL	Channel	Added By
<div>https://hooks.slack.com/s<div>Copy</div></div>	mason_abbruzzese_channel	<div>Mason</div> <div>Abbruzzese</div> <div>Apr 14, 2025</div> <div></div>

Add New Webhook to Workspace

That will generate a `hooks.slack.com` URL that you will paste in the form found at any page's `/alarms/slack`:

- Click save, and you're done.
